DETAILED ACTION

This action is a non-final office action.

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-16 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,688,607 in view of Inka (US. 4,012,273).

Casey teaches a method for sealing a threaded assembly comprising providing a dispenser having a joint-sealing material packaged therein, the joint-sealing material comprises a multifilament yarn and a joint sealing composition ready coated over the yarn, the dispenser having cap, a cutting member, a hole on the dispenser for pulling out the joint-sealing material from the container, the joint-sealing composition is a non-curing paste, the joint-sealing composition comprises an oil and a filler, the filler is a calcium carbonate filler, the joint sealing

Art Unit: 3673

composition having a viscosity from about 20000 to 500000 mPas, the joint-sealing composition is a curable polymeric composition, the joint sealing composition having a reactive monomer, the joint-sealing composition comprises a hydroxyl-terminated polydimethyl siloxane and a filler and the yarn being a polyamide yarn or polypropylene yarn. Casey fails to teach removing a portion of the joint-sealing material from the dispenser, applying the joint-sealing material to threads of a first threaded component of the threaded assembly, providing a second threaded component and screwing the second threaded component over the threads of the first threaded component. Inka teaches removing a portion of a joint sealing material (12) from a dispenser (figure 3), applying the joint-sealing material to a thread of a first member (figure 1), providing a second threaded member and screwing the second threaded component over the first member (column 3, lines 31-35). It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the material of Casey as taught by Inka to provide seal around pipe joints.

Response to Arguments

3. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vishal Patel whose telephone number is 571-272-7060. The examiner can normally be reached on 6:30am to 8:00pm.

Application/Control Number: 10/658,877 Page 4

Art Unit: 3673

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia L. Engle can be reached on 571-272-6660. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
